

Water Trucks

EMI Water Truck Tank System

We will build on new, used, or even your own chassis. Our water truck tanks are constructed with 3/16" baffles and lower tank segments with 10-gauge tops. All of our water trucks offer three ways to fill the tank system hydrant-fill, drop-fill, and self-draft. Each water truck includes pneumatic spray heads, (console controlled from inside of the cab). Our water truck tank fabrication is done by Central Star Manufacturing. Our water trucks are widely used in road construction, mining, and various dust control industries. We offer two standard sizes, #2250 gallon and #4000 gallon water truck tanks.
